Energy Star Wall and Desktop Transformers

Energy Star is a program established by the US Environmental Protection Agency to establish achievable standards for energy efficiency and to encourage manufacturers to make electrical products that use energy more efficiently. The Energy Star program has established standards for External Power Supplies: • Efficiency Level III requires a minimum efficiency level based on rated output wattage and a maximum power output at no-load conditions of 0.75W beginning Jan. 1, 2007. • Efficiency Level IV requires a minimum efficiency level based on rated output wattage and a maximum power output at no-load condition of 0.50W beginning Jan. 1, 2008. The **CEC (California Energy Commission)** has mandated that all external power supplies must meet Energy Star Level III standards beginning Jan 1, 2007 and Energy Star Level IV standards beginning Jan 1, 2008 for such products to be legally sold in the state of California – regardless of whether they are sold separately or as a power supply for a different product.
All CUI, Inc. EPS, ETS and EMS series models meet Energy Star Level IV efficiency standards.

These “Point of Load” modules serve the needs specifically of the fixed and mobile telecommunications and computing market, employing economical distributed Power Architectures. Provide precisely regulated output voltage range from 0.75V to 5VDC over a wide range of input voltage and can operate over an ambient temp erature range of -40°C ~ 85°C. Ultra-high efficiency operation is achieved through the use of synchronous rectification and drive control techniques. The modules are fully protected against short circuit and over-temperature conditions.

Features:

- Cost efficient open frame design
- No minimum load requirement (Stable at all loads)
- Remote On/Off
- Continuous short-circuit protection and over current protection
- Over-temperature protection (OTP)
- UL/IEC/EN60950 Certified

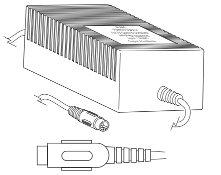
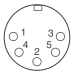
Wide Range Input Series - Switching Regulated Tabletops





FCC IEC

Note: Outside ring on all units is an EMI earth ground (Not to be used as a safety ground).

Features: • IEC input connector • One year warranty.

General Specifications: • Storage Temperature: -55°C ~ 85°C • Operating Temperature: 0°C ~ 40°C

Output Specifications: • Line Regulation: ±0.2% maximum • Load Regulation: ±5% from 60% load nominal except output #2 • Cross Regulation: ±2%. Cross regulation specifies the maximum voltage change on auxiliary outputs when the +5V output load current is varied from 75% of full rated to either 50% or 100% of full rated • Set Point: ±2% at 60% load on main input • Ripple and Noise: ±1% maximum • Overload Protection: All outputs protected against overloads and short circuit. Automatic recovery upon removal of overload conditions • Overvoltage Protection: Provided on main output only and set at 115-135% • Output Overshoot: No overshoot on turn-on or turn-off • Transient Response: For all outputs, recovery to within 1% of nominal output occurs within 2 milliseconds for a 50% to 100% load step. Maximum excursion is 6% from initial voltage setpoint • Hold-Up Time: 25msec minimum at full rated load and nominal AC input voltage • Minimum Load: Third quarter down to zero load.

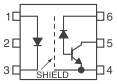
Non Inverting Output

Fig. 4



Toshiba's IRED SMT Photocouplers consist of a GaAℓAs light-emitting diode and an integrated high-gain, high-speed photodetector. **TLP102, TLP106:** Suitable for isolating input control signals to intelligent power modules, have a built-in Schmitt trigger and have common-mode transient immunity of 10 kV/µs. **TLP116:** Intended for digital isolation in A/D and D/A converters, high-speed line receivers, microprocessor system interfaces, and plasma display panels. **TLP701, TLP705:** Suitable for gate driving circuits for IGBTs or power MOSFETs. Capable of "direct" gate driving of low-power IGBTs. **TLP706:** Buffer logic type. For inverter logic, the TPL702 is in line-up. **TLP702:** Inverter logic type. For buffer logic, the TPL706 is in line-up. **TLP716:** 50% smaller than the 8PIN DIP and has suited the safety standard reinforced insulation class, so mounting area in safety standard required equipment can be reduced. **TLP719:** Has a Faraday shield intergrated on the photodetector chip to provide an effective common mode noise transient immunity. It is also suitable for application in noisy environmental conditions.

NVE CORPORATION

IsoLoop® High Performance Digital Isolators

IsoLoop digital isolators from NVE are superior performance alternatives to traditional opto-couplers or optoisolators. These highly integrated devices deliver up to 100MBd of data per channel with only 2ns Pulse Width Distortion. They are available in single, dual and quad channel form factors. IsoLoop bus isolators offer the designer highly compact, isolated RS 485 and RS 422 compliant devices. These high-speed products are ideal for many industrial communication applications, including PROFIBUS.

ANALOG DEVICES

*i*Coupler® Digital Isolators

*i*Coupler isolation technology combines the dc isolation properties of microtransformers with semiconductor processing techniques to provide performance, power and integration benefits superior to those offered by traditional optocoupler technology.
*i*Coupler components operate at higher data rates, provide better timing accuracy and common-mode transient immunity and operate at lower power levels than optocouplers.
They operate over wider temperature and supply voltage ranges than their optical competition.
The *i*Coupler technology rescues modern designs from the poorly controlled, temperature sensitive and time-dependent current transfer characteristics of standard optocouplers.

‡ Photocells are light adapted at 100 to 500 Lux.

TDK Visible Radiant Optical Sensors — Photodiodes

These photodiodes use an amorphous silicone semiconductor on the glass substrate. They are the most suitable for brightness adjustment and control of lighting systems.

Features:

• Highly receptive to visible light but not receptive to infrared light (close to human eye visibility) • Accurate illumination measurement can be taken without the use of an infrared filter

Specifications:

• Operating Temperature: -20°C ~ 85°C • Spectral Sensitivity Area: 350 ~ 750 nm • Peak of sensitivity: 580nm ±20

Application:

Brightness control for LCD, EL, and CRT • Brightness control for keypads (e.g. mobile phones) • Positioning scanline for rear projection TV • Exposure adjust for compact camera • Sub exposure adjust for digital camera

Non-Amplified Optical Sensors

Omron's optical sensors are designed to meet the needs of positioning, detection of components and objects, cam-timer switching-control and robotic control. Available in two types: nonamplified optical sensors are low cost, fast response optical sensors used mainly in design-in processes. Amplified optical sensors are ideal for plug and play applications where external light does not affect performance and wide input voltages can be applied.

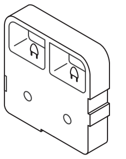
D6A Air Flow Sensor



The industry first D6A filter sensor contains a microprocessor with a complex algorithms that provides a temperature reference point to see if a filter fan is moving the right amount of air. If the sensor indicates it is not, then the user knows the filter is clogged. With its sensing capabilities, the D6A provides reliability protection, ensuring the dependability of continued operation of expensive equipment. This clogged filter sensor is excellent for servers, high end routers and network devices. Other applications include uninterruptible power supplies, cash registers and other types of machines that use a filter fan.

Specifications: • Supply Voltage: DC12V • Current Consumption: 60mA (Maximum)

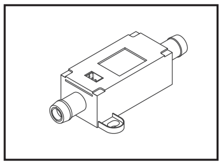
D6F Gas Flow Sensor



The D6F is a new supersensitive gas flow sensor. It is able to measure both gas velocity and direction at extremely low flow rates, and is ideal for looking at low pressure medical gases, boiler emissions, and HVAC system airflow. It is suitable for measuring the amount of oxygen and nitrogen dioxide, consumed from a respiratory apparatus in surgery. It can also be used for monitoring air circulation in a building and thus improving the performance and efficiency of air conditioning and building comfort systems. The extreme sensitivity is achieved with a tiny heating element, associated with temperature sensors on both sides. The deviation is temperature measured by the two sensors and used to calculate the gas flow and direction, generating a non-linear analogue output in the range of 1V ~ 5V.

D6F Air Flow Sensor

Omron's mass flow sensor will detect flows of 1 ~ 10 liters per minute up to a 1 ~ 50 liter per minute version. They use a wide supply voltage range of 10.8 ~ 26.4VDC and will output an analog voltage of 1 ~ 5VDC. Perfect for medical apparatus, fuel cell monitoring and measuring instruments. Right-angle connect.

Inductive Proximity Sensors

Omron's line of inductive sensors are designed for detecting the presence or absence of ferrous metal close to the sensor and provide an output when detected. Because inductive sensors use electromagnetic fields, they excel over photo type sensors in environments containing water, oil, dust and dirt. Shielded sensors are made with a shielding plate around the ferrite core to focus ferrous metal sensing at the sensors head. It also allows the sensor to be located or mounted close to surrounding metals.

PIR Motion Sensors

RoHS COMPLIANT

MP motion sensors are passive infrared sensors which detect changes in infrared rays when there is movement from a person or object. Intended as human body and animal detection with the world's smallest built-in amplifier design and small size. Perfect for connecting directly into a microprocessor.

Sensor Types: • Standard Detection for most general purpose movement detection • Slight Detection for movements as low as 7.8" • Spot Detection for detecting movements in a much smaller area or focused spot. • 10 Meter Detection for long distance, wide area movement detection

Output Types: • Digital for automated On-Off controls, energy saving for vending machines, ATM's, video games and theme parks • Analog for fine motion detection, slight movements and small detection • Lens color does not affect sensor operation

Photo Interrupter

Photo Interrupters are a transmissive photosensor series in which a high efficiency GaAs infrared light emitting diode is used as the light emitting element, and a high sensitivity photo transistor is used as the light detecting element. The two elements are arranged so as to face each other, and objects passing between them are detected.

HAMLIN

Hall Effect Sensors

Hamlin's Hall Effect Sensor technology offers unique design benefits. In applications where high speed switching is required, speeds of up to 10 KHz can be reached. The component package is small compared with other sensing technologies and the sensors can be specified with either a digital or analogue output. *(55075 has a robust stainless steel barrel and comes with two retaining nuts.)*

Operating Temperature: -40°C ~ 100°C *(55505 Operating Temp.: -40°C ~ 125°C)*

NEW! VRS and Hall Effect Speed Sensors

VRS Sensors are for high speed sensing applications where higher output voltages are needed. VRS Sensors perform best at low to medium speeds with medium to high impedance loads.

Hall Effect Speed Sensors are designed for use with a ferromagnetic gear or pole wheel to generate impulse frequencies proportional to the speed of the target.

Panasonic® Hall Effect Sensor ICs

Panasonic's Hall IC is a combination of a Hall element, amplifier, Schmidt circuit, and stabilized power supply/temperature compensator integrated on an identical chip by using the IC technology. It amplifies Hall element output at the amplifier, converts into a digital signal through the Schmidt circuit, and drives the TTL or MOS IC directly.

Features: • Stable temperature characteristics due to the additional temperature compensator • TTL and MOS ICs directly driveable by output • Semi–permanent service life due to no contact parts • Small change of the operating flux density against mechanical stress • Provided with the output pull-up resistors (typical 27kΩ or open collector output (see chart) • Operating Temperature: -40°C ~ 100°C • Supply Current Maximum: 6mA • Output Circuit Maximum: 20mA

Applications: • Speed Sensors • Position Sensors • Rotation Sensors • Keyboard Switches • Microswitches

NEW! Pressure Sensors

Pressure sensors, force sensors and airflow sensors are all developed around semiconductor technology. Each pressure sensor contains a silicon chip with an integral sensing diaphragm and four piezoresistors. Pressure applied on the diaphragm causes it to flex, changing the resistance. This causes a low level output voltage proportional to pressure. Airflow sensors contain a thin-film, thermally isolated bridge structure containing heater and temperature sensing elements. The bridge structure provides a sensitive and fast response to the flow of air or other gas over the chip.

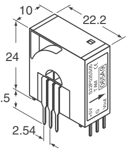
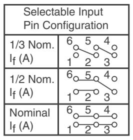
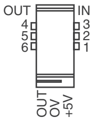
Closed Loop Multi-range Current Sensors







Closed loop (compensated) current sensor provides an exact duplication of the primary current scaled by the number of turns in the secondary coil. Each multi-range sensor has a nominal sensing current but can be changed by configuring the primary pins. The sensing current can be scaled down by 1/2 or 1/3 the nominal output sensing current, which gives you the flexibility to sense 3 different current ranges with only one part.

Specifications (measured at input voltage and 25°C): • Frequency Bandwidth S22P(1dB): DC-200kHz (at higher frequencies derating is required to prevent core from overheating) • Output Linearity: ±0.25% • Operating Temperature: -10°C ~ 85°C • Insulation Resistance @ 500VDC: ≥ 500mΩ • Response Time: 1μSec. • Load Resistor 10kΩ 3mW Minimum

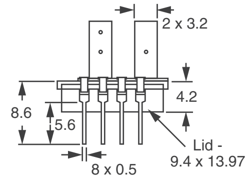
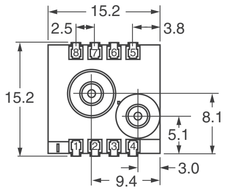
PC Board Mountable Pressure Sensors Temperature Compensated

These pressure sensors are intended for cost sensitive applications where excellent performance and long-term stability are required. Integral temperature compensation is provided using laser-trimmed resistors. An additional laser-trimmed resistor is included to normalize pressure sensitivity variations by programming the gain of an external differential amplifier. This provides sensitivity interchangeability of ±1%.

Features: • ±0.1% Non-linearity • ±1.0% Interchangeable Span (provided by gain set resistor) • Solid State Reliability • Low Power

Specifications: • **Output:** 0-100mV typical (full scale) • **Supply Current:** 1.5mA typical • **Response Time:** 1.0mSec typical (For a zero-to-full scale pressure step change) • **Operating Temperature:** -40°C ~ 125°C





Tube Length:
470 (±5mil.)

TDK's CHS Series humidity sensors are compact and extremely simple to apply. Because they contain the necessary circuitry, there is no need to provide additional control circuitry or perform time-consuming calibration. With simple connection to a power supply, they will output DC at 100% relative humidity. This makes it possible to read RH directly with a voltmeter.

Through Beam

Photoelectric sensors consist of a light source and detector for object detection.

Through-beam sensors use a separate transmitter and receiver, which an object must pass between to block the light.

Retroflective sensors is a combined transmitter/receiver in one body and is reflected. A reflector typically is used to return the beam from the transmitter back to the receiver. Once an object is moved between the reflector and emitter/detector, the receiver output turns on.

Diffuse reflective is a combined transmitter/receiver in one body. Objects are detected by moving an object closer to the sensor directly from the front, rather than from the side. Once an object has come within the sensing distance, the amount of reflected light is sufficient to trigger the receiver output.

Capacitive Proximity Sensors

Capacitive sensors operate similar to Inductive sensors except that a plate is used instead of a coil in the sensor’s head. This plate develops a capacitive field between the sensor and ground. When an object comes within sensing distance of the sensor, the capacitive field changes which gets detected by the sensor and turns on the output. Perfect for detecting both metallic and non-metallic objects such as glass, wood, water, oils and plastics. Also works well for detecting liquids and solids in containers.

Pre-made fiber optic cables that enable very confined mounting spaces and very fast target detection. Use **Through-beam** for long distance detection where your transmit and receive cable are separated. Use **Concentric Beam** for depth detection or changing target distances where eliminating background objects is required. Periscope sensing heads (Side Beam) save space in right angle detecting. Most fiber cables offer IP67 protection and temperature ratings of -40°C ~ 70°C.

OMRON Touch Sensors

The **B6TS** has successfully integrated the various functions required for a capacitance touch sensor including sensitivity setting, noise processing and compensation into just one IC combined with a few peripheral components. In addition, we supply a tool called the Workbench to make full use of the IC by providing total support for all work required in designing - electrode design, sensitivity adjustment, threshold setting, mode selection and signal monitoring.

The **B6TW** is a tool for using the B6TS series touch sensor IC, and includes PC software and an interface board. Use of Workbench allows easy execution of the operations required in design - electrode design, sensitivity adjustment, threshold setting, mode selection and signal monitoring and makes it easy for users to incorporate highly reliable touch sensors into devices. Workbench can be used not only for product design, but also for prior verification of functions.

Functions:

• Runs on Windows PCs (Windows XP and 2000 recommended) • Connects with a PC via serial communication • Comes with an evaluation board for four or eight channels for immediate evaluation

Capacitive Humidity Sensors

The capacitive atmospheric humidity sensor consists of a non-conductive foil, which is covered on both sides with a layer of gold. The dielectric constant of the foil changes as a function of the relative humidity of the ambient atmosphere, and accordingly, the capacitance value of the sensor is a measure for relative humidity.

LDT Vibration Sensor

Typically, a 0.005" (125µm) polyester layer is laminated to a 28µm piezo film element. When used in a "bending" mode, laminated film elements develop much higher voltage output when flexed than non-laminated elements. The piezo film is off the neutral axis in the laminate, and is strained more when flexed.

The SCP1000 performs almost complete data processing on-chip. The communication between the SCP1000 and its host micro-controller (µC) is based on a serial interface, an interrupt line and specialized pins used to trigger special functions. Two different serial interfaces are available: SPI and TWI (TWI is very similar to I^2C bus). The appropriate communication interface is pre-programmed in the factory.

The SCP1000 pressure demonstrator is designed to give a quick access and understanding on the performance and capabilities of the SCP1000 pressure component. The demo kit supports SCP1000-D01 and SCP1000-D11 sensors.

SCP1000 Demo Kit Includes:
SCP1000-D01 sensor soldered on chip carrier PCB, USB interface card inside the demo box, USB cable, CD-ROM with documentation, drivers and GUI software running on PC

Surface Mount NTC Thermistors

NTC (Negative Temperature Coefficient) Thermistors are manufactured from sintered metal oxides. TDK thermistors have low thermal time constraints, which result in extremely high rates of resistance change to accurately track the temperature.

Features: • Layered internal electrode structure • Good stability of value after soldering

CANTHERM NTC Thermistors

CWF Precision NTC Thermistor Probes

The CWF series NTC Thermistors are designed to facilitate installation in a wide variety of applications. PVC leads are applied to a precision, high-reliability NTC thermistor, insulated with heat conductive water resistant materials and potted into probe bodies.

Features: • Small size and fast response, temperature coefficient of resistance can reach- (2% ~ 5%/°C) • Long-term Stability and Reliability (yearly drift of ≤1%) • Excellent Tolerance and Interchangeability (the accuracy of R and B value can be ±1%) • Double layer packaging provides excellent insulation and high strength and impact resistance • Time Constant of ≤15S ~ 70S

MF11 NTC Thermistor

The MF11 series of NTC Thermistors is designed for temperature measurement and the temperature compensation of measurement instruments and electronic circuits.

Features: • Broad range of resistance • Standard tolerances: ±5% and ±10% • Measuring power ≤0.5mW • Dissipation Constant ≥6.0mW/°C • Time Constant of ≤30 seconds • Rated Power: 0.5W • Good level of Tolerance and Interchangeability

MF51E High Precision NTC Thermistors

The MF51E NTC Thermistors were specially designed for use in electronic thermometers which require better than average accuracy. The extremely small size allows the thermistor to respond very quickly to tiny changes in temperature.

Features:• Long-term Stability and Reliability • Excellent Tolerance and Interchangeability • Time Constant of ≤3.2 seconds • Rated Power: 3.5mW • Operating Temperature Range: -40°C ~ 100°C

MF52 NTC Thermistors

The MF52 Series of Pearl-Shaped NTC Thermistors is ethoxyline resin coated. The small size is made possible by new materials and manufacturing methods which provide the benefit of close tolerances and fast response.

Features: • Small Size and fast response • Long-term Stability and Reliability • Excellent Tolerance and Interchangeability • Time Constant of ≤7 seconds in still air • UL Listed E240991

MF72 Power NTC Thermistors

The MF72 series Power NTC Thermistors provide inrush current suppression for sensitive electronics. Connecting a MF72 in series with the power source will limit the current surges typically created at turn on. Once the circuit is energized the resistance of the MF72 will decrease rapidly to a very low value, power consumption can be ignored and there will be no effect on normal operating current.

Features: • Small Size and fast response • High Power handling capability • Fast response to surge current • High material constant (B value) • Low residual resistance • Long-term Stability and Reliability • UL 1434 Listed E241319

U.S.SENSOR Thermistors

Precision Thermistor

U.S. Sensor's standard precision interchangeable thermistors are low cost, highly accurate, stable devices designed specifically for temperature sensing and control applications. They are particularly suited for uses where their precision interchangeability eliminates the necessity for costly individual circuit calibration.

GMR Digital Magnetic Sensors

The GMR Switch will accurately and reliably sense magnetic fields, with less error than any other magnetic sensor on the market today. In addition, there is minimal shift in the magnetic field operate point of the GMR Switch over both voltage and temperature extremes. This gives the manufacturer the ability to make a high precision, high tolerance magnetic sensing assembly.

Flow Sensors

Features: Operating Temperature: Brass: -20°F ~ 212°F (-29°C ~ 100°C), Polypropylene Body: -20°F ~ 180°F (-29°C ~ 82°C)
RFS Series - Flow Set Point Switching: Combines visual confirmation of flow with dynamic, electronic switch operation. Easy, adjustable switch point calibration: a local LED signals when set point is reached. **RFO Type - Flow Rate Monitoring**: Output signal for RFO Types is an on/off pulse of the DC voltage supplied to the unit, it is compatible with all digital logic families. Frequency of the output pulse is proportional to the flow rate and ranges from approximately 25Hz at low flow to 225Hz at high flow. **RFI Type - Visual Indicators**: A bright orange rotor turning with fluid flow. Simple, direct and reliable. Flow rate is estimated, or simply confirmed, by viewing the speed of the turning rotor. Either port may be used for incoming flow, and bayonet mounting lens is easily removed for quick clean out.

5-Wire Resistive Touch Screen

The Bergquist 5-Wire Resistive Touch Screens are inherently the most durable resistive touch screens on the market, engineered to withstand high-usage environments. Unlike other resistive technologies that must use two opposing layers to create X- and Y- axis measurements (such as 4-wire and 8-wire technologies), 5-wire sensors utilize a stable glass substrate for both X- and Y- axis measurements.

Features: • Durability: 35 Million actuations/Drift-free operation at all times • Accuracy: 98.5% accurate - without external electronic correction • Actuation: Any finger, glove or stylus • Optics: Index-matched materials provide 81% light transmission and patented spacer dot design • Warranty: All 5-wire touch screens come with a 5-year warranty

Touch Screen Starter Kit Contains: • Touch Screen Controller • RS-232 and USB Cable • Software and Drivers • 110V Power Supply • Documentation and Manuals • Plastic Case • Storage Space for Touch Sensor Screen **Note:** *Touch Sensor of Choice Must Be Purchased Separately.*

Graphical LCD Kits and OS Chips

3.8” Starter Kit (STK-GT380):

The Starter Kit supersedes STK-GT320. It includes a 3.8” module QVGA monochrome display with a six ultrabright LED backlight, a fully integrated analog touch panel, and integrated Amulet Compiler Software, a serial cable, stylus, and 5vDC power supply.

5.7” On-Board Starter Kit (STK-AOB3202405):

The Starter Kit includes a 5.7” Amulet-on-Board Module with integrated touch screen and LED backlight. In addition, you will receive the Amulet compiler software, serial cable, program interface board, 5V power supply and stylus.

Graphical OS Chip (AGB64LV01-QC-E):

The chip is a combination microprocessor, LCD controller, and graphics library. The chip renders GUI pages containing graphic images, Amulet Widgets, and other UI objects directly to the LCD. This allows an embedded micro to do its job more efficiently. Thus, the main application can run on a smaller processor with less RAM and ROM. User interface pages are quickly and easily created using off the shelf HTML editors.

CCFL Controllers and Input Cable Assemblies

LX1686E: This Backlight Controller IC provides all the control functions needed to implement Microsemi's direct drive inverters used to operate cold cathode fluorescent lamps (CCFL's).

LX1689: The latest generation Direct Drive CCFL uses new circuit design techniques (patents pending) and combines digital and linear circuits with advanced BiCMOS process to create a more complete controller in a small package.

LX1691: This cost reduced, enhanced feature set Direct Drive CCFL architecture is based on the very popular LX1689. By limiting V_{DDP} to 5.5V and using advanced processing, die size and package pin count is decreased while improving dimming precision. LX1691 based inverter modules can be designed for virtually any CCFL appliance from digital cameras and PDA's to big screen monitors and driver viewable automotive displays.

LX1691A: This enhanced Direct Drive CCFL architecture is based on the LX1691. LX1691A based inverter modules can be designed for virtually any CCFL appliance from digital cameras and PDA's to big screen monitors and driver viewable automotive displays.

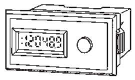
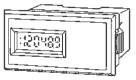
CUB3 and CUB3T





CUB3

The CUB3 is a battery-powered up counter for counting dry contact closures from switches or relay contacts. Built-in debounce circuitry ensures accurate counts up to 100Hz. It can also be used with transistor closures and has a reset button on the front of the counter.

CUB3T

The CUB3T is a time display that will count the length of time that the inputs are connected together. Inputs are triggered using a dry contact switch to start the timing circuit. Time indicators require a supply voltage of 10-300VAC or DC. Rear reset only.

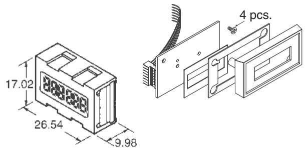
SUB-CUB 1 and 2 Counters

SUB-CUB 1 and 2

SUB-CUB 1 and 2 are component-type up counters designed to be snapped down onto a standard 1/16" PCB. Solderless elastomeric pads contact copper pads on the PCB for inputs, reset and display latch and test functions. Solderless connections are corrosion-proof, gas-tight interface contacts for high reliability. Ultra low power (5V at 15µA typical) and latchable display with automatic leading zero blanking. Ideal in applications for register status and usage, maintenance, diagnostics, time-duration or period readouts.



SUPER SUB-CUB

SUPER SUB-CUB provides all the capabilities of SUB-CUB 1 and 2, plus four operating modes capable of bi-directional counting, quadrature counting, coincidence counting and anti-coincidence adding and subtracting. Optional bezel mounting kit provides a crisp, clean panel-mount option for panel-mounted applications.

MDMU Counter/Timer/Tach

The MDMU is a complete 6-digit counter/timer/tach in a small panel mounted or printed circuit board (PCB) mounted package. It is designed to operate from a 5VDC power supply. It has a 6-digit LCD with 0.35" (8.89mm) high digits and 5 selectable decimal points. In the timer mode, a flashing annunciator is supplied to indicate that the signal input of the MDMU is active. The displays are available in Positive Image Reflective (black digits, reflective background) or Negative Image Transmissive (illuminated digits, dark background) with red or yellow/green backlighting.

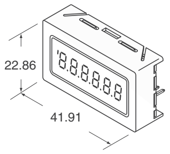
Circuit Board Mount



Counter Mode: It can be selected by setting the Mode Select Inputs to the appropriate levels (Hardware selection). A rate multiplier of 0.0001 ~ 1.9999 and a decimal point of 0 through 0.00000 can be selected using the Program mode. Decimal points may also be set using the DP Inputs (Hardware selection). Both the Count (CNT) and LSC Inputs can be used. (Using the Program mode option causes the counter to increment on the opposite edge of the Input signal.)

Timer Mode: This mode and range can be selected by either setting the Mode Select Inputs to the appropriate levels (Hardware selection) or by selecting the range in the Program mode. The available timing range increments are 1 msec, 10 msec, 100 msec, 1 second, 0.1 minute, 1 minute, 0.01 hour, 0.1 hour, 1 hour, and hr:min:sec. The Timer Active annunciator will flash at a 2Hz rate when the input to the timer is activated. Both the CNT and the LSC inputs can be used. The Inhibit (INH) Input can be used to enable or disable Leading Zero Blanking (LZB).

Tach Mode: It can be selected by setting the Mode Select Inputs to the appropriate levels (Hardware selection). In the Tach mode, the MDMU operates as a fixed 1 second time base tachometer. In the Program mode, the time base can be set 1 through 7 seconds (in whole second increments). The rate multiplier can also be programmed from 0.0001 through 1.9999. Decimal points can be set from 0 through 0.00000. Decimal points may also be set using the DP Inputs. Both the CNT and the LSC Inputs can be used.

Timers/Time Delay Relays

Potter & Brumfield timer relays are versatile time/function adjustable relays for industrial and time delay type applications. By setting the timing mode, selecting the time duration and applying 120VAC to power the timing circuitry, a dry contact relay will trip On or Off at the end of the set time. Delay-On or Delay-Off modes will start upon power up and delay turning the relay output On or Off for the user selected time Using the Cycle or Repeat Mode will put the timer in a continuous On and Off cycle where the time On and time Off are equal lengths. Model CRB relays enable separate On and Off adjustable times for Cycle timing.

MARTEL ELECTRONICS Digital Panel Meters

When choosing a Martel Panel Meter for your application, be aware of the difference between standard versions and single-ended versions designated by the suffix "S". Use standard versions with floating (isolated) input signals and use single-ended (S-type) versions when the signal to be measured shares the same ground as the meter's power supply.

(Loop Powered - No external voltage required.)

CTON Digital Panel Meters are low cost, professional looking meters for industrial and OEM applications. Voltmeter versions feature autozero on powerup and can read both positive and negative DC voltages. Selectable decimal points allow easy voltage readings. LCD versions are available in either non-backlit (std LCD) or backlit (Red, Green or Blue) for low light viewing. CTON's 4-20mA loop type meters are intended to interface with sensor inputs that require power from the meter to operate. Sensors such as temperature, pressure, gas, airflow vibration, etc. can be used for loop meter monitoring. Use LCD meters for low power applications and long lifetimes or use LED versions for easier viewing in varying light conditions and different angles.

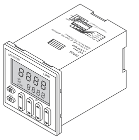
LC4H Digital Counters



Panasonic/Aromat's LC4H Digital Counters are presettable counters that will count up or count down until your preset count is reached, then trigger the internal relay to switch in one of seven output modes.

Features such as 2 color back-lit display and waterproof front panel display allow this counter to be used in extreme environments.

10 Watt LED Array

OPTEK Lednium Solid State Lighting products package the highest quality LED chips. Typically the lumen maintenance of these can be as high as 70% after 50,000 hours of operation. That is, the percentage of the initial light output still being emitted after a specified operating time. This prediction is based on specific test results and on tests on similar materials, and relies on strict observation of the design limits and ratings.

Specifications:

- Input Current: 1.05A • Junction Temperature: Tj = 25°C • Viewing Angle at half maximum intensity: 120° • DC Forward Current (A): 1.05 maximum

Panasonic® Blue LEDs

High Brightness

Max Ratings:
Power Consumption: 120mW
Forward Current: 30mA
Reverse Voltage: 5V
Operating Ambient Temperature: -25~80°C
Storage Temperature: -30~100°C
Water clear lens when off.

Blue LED Precautions in Handling:

A blue LED is sensitive to static electricity and care should be fully taken in handling it. Particularly, when an overvoltage is applied, which exceeds the absolute maximum rating of the blue LED, its energy damages the LED.
